SIMATS ENGINEERING

ASSESSMENT TOOL 1 - Concept Mapping

COURSE NAME: Data Structures **COURSE CODE: CSA03**

Register Number	**192521003**
Name	**S.HARISH**

COURSE OUTCOME COVERED

CO1: *Apply suitable data structures and ADTs for efficient problem solving by analyzing time and space complexity.* (BL2, BL3)

Assessment Tool Weightage: 35%

Questions:2 **EACH QUESTIONS CARRIES:** 10 MARKS **Total Marks:**20 **Duration:** ONE HOUR

Q1 A smart healthcare system processes large volumes of patient data such as temperature readings, medical history, and diagnostic details. Construct a concept map linking the progression from Data → Data Object → Data Structure → Abstract Data Type (ADT) → Implementation in C. Identify relevant sub-concepts such as structures, pointers, and operations, and establish meaningful relationships among them. Organize the concept map hierarchically and justify how each level contributes to efficient data organization, processing, and improved system performance.

Q2 A smart city traffic management system handles data related to vehicle movement, road networks, and signal control. Construct a concept map connecting Primitive Data Structures → Non-Primitive Data Structures → Linear → Non-Linear Structures. Include examples such as arrays, linked lists, trees, and graphs, and illustrate their applications in traffic management. Explain the relationships between these structures and justify their classification based on functionality and efficiency.

Code of Conduct:

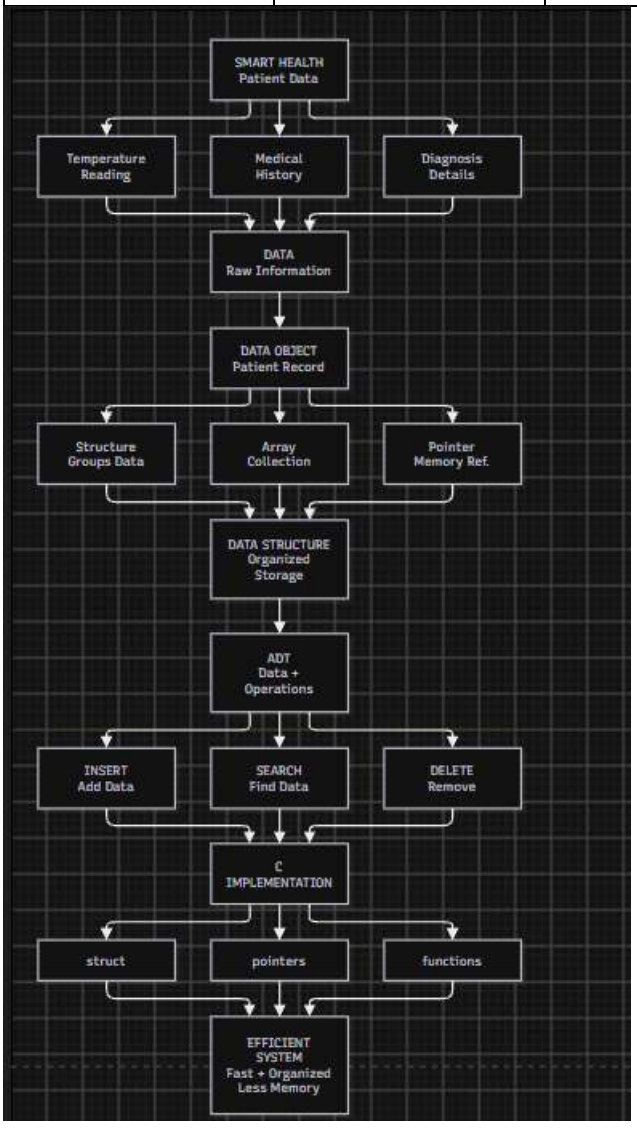

I S.HARISH/192521003 (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.
I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student:
S.HARISH

Explanation and Relationships

1).

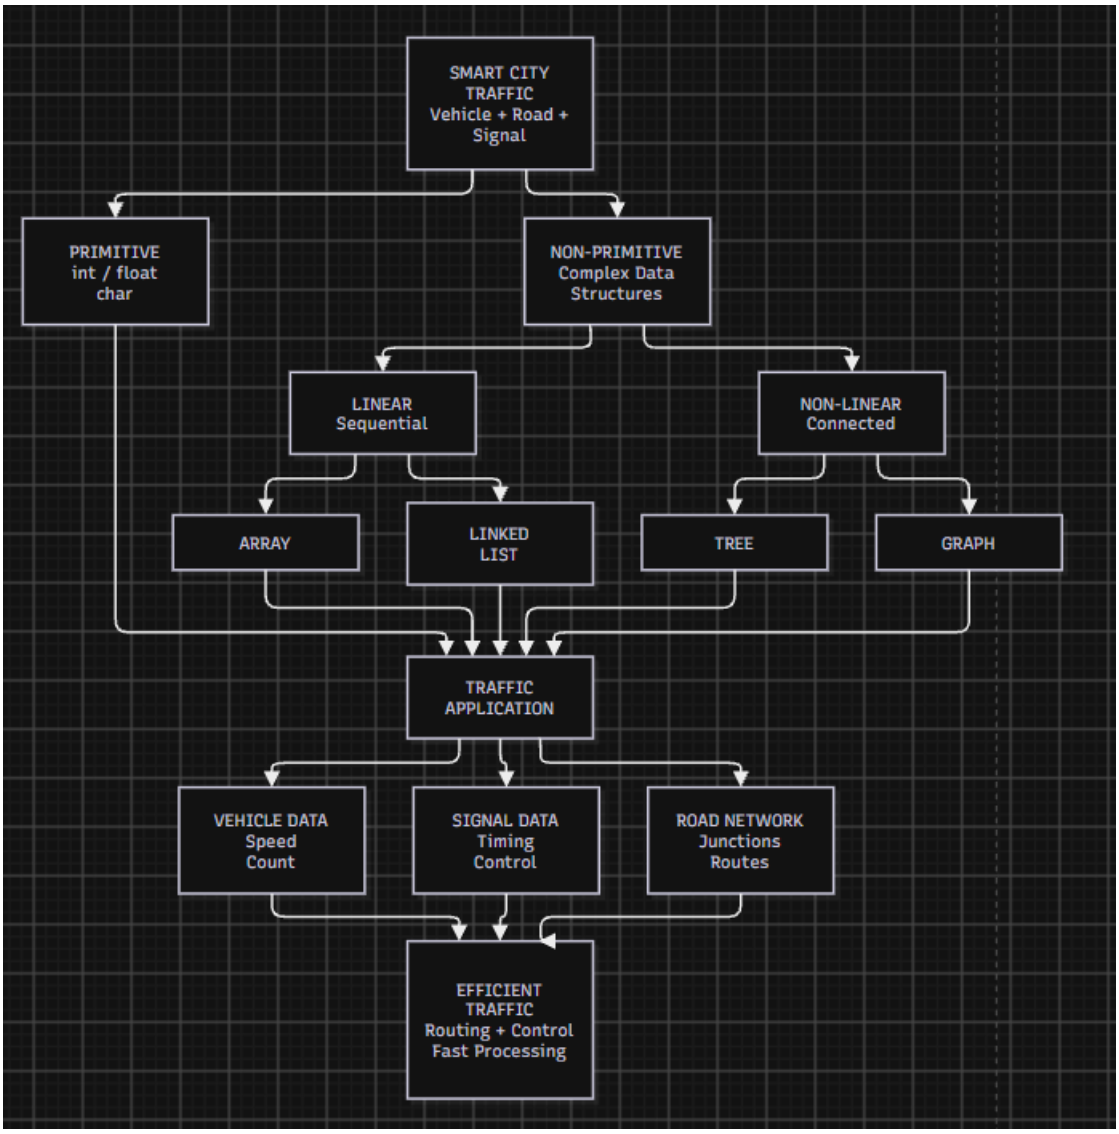

Concept	Brief Meaning	Benefit
Data	Raw patient details	Basic input
Data Object	Patient record	Groups data
Data Structure	Organizes data	Easy access
Structure	Groups data types	Better organization
Pointer	Memory reference	Fast access
ADT	Data + operations	Easy processing
C Implementation	struct + pointers	Practical execution

Result: Patient data is organized efficiently, enabling faster processing and better system performance.

2).

Structure	Type	Example	Traffic Application
Primitive	Basic	int, float, char	Vehicle count
Array	Linear	Array	Signal data
Linked List	Linear	Nodes	Vehicle data
Tree	Non-Linear	Tree	Road hierarchy
Graph	Non-Linear	Vertices & Edges	Road network

Result: Data structures are classified effectively to support efficient vehicle, road, and traffic management.

RUBRICS FOR CALCULATION:

Concept Mapping					
Criteria	**Weightage**	**Level 4 (Exemplary)**	**Level 3 (Proficient)**	**Level 2 (Developing)**	**Level 1 (Beginning)**
Concept Identification	25%	Identifies all key concepts from literature accurately and comprehensively	Identifies most key concepts with minor omissions	Identifies limited concepts; some are irrelevant or missing	Fails to identify essential concepts
Linkages	25%	Establishes clear, meaningful, and accurate relationships between concepts	Shows correct relationships with minor gaps	Relationships are weak, unclear, or partially incorrect	No meaningful relationships established
Organization	20%	Concepts are well-structured hierarchically with logical flow and grouping	Mostly organized with minor structural issues	Some organization but lacks clear hierarchy	No logical organization or structure
Integration of Literature	20%	Integrates multiple studies effectively to show connections and comparisons	Shows some integration of literature	Limited integration; mostly isolated concepts	No integration of literature evidence
Clarity	10%	Concept map is clear, neat, visually structured, and easy to interpret	Generally clear with minor readability issues	Clarity is reduced; difficult to interpret in parts	Poorly presented and hard to understand
